Assembly instructions

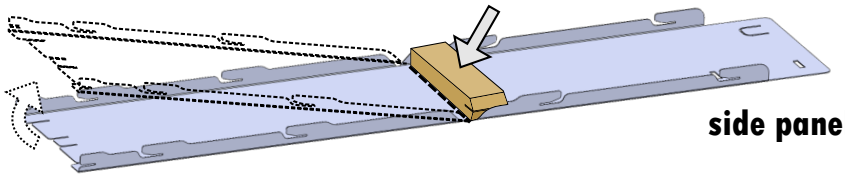

DUPLEX-WABENTASCHE
www.varroa-controller.com

Before assembly:

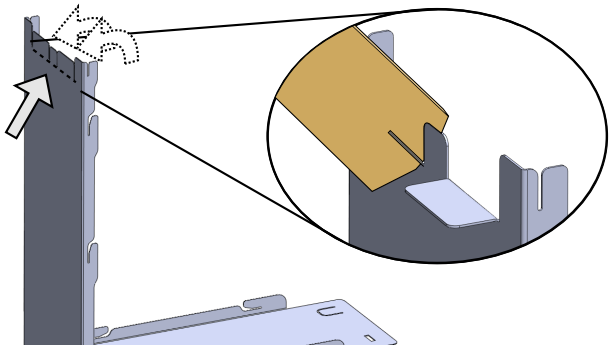

The Duplex-Framebox is degreased at the factory. However, we strongly recommend cleaning it with soapy water and then drying it before using it for the first time.

Notes: We recommend using the enclosed bending aid for bending. Pliers or a hammer can also be used to bend the tabs more evenly and tap them flat. Please take care not to injure yourself during assembly. (possibly wear appropriate gloves)

1. Lay the side panel flat on a level work surface.
Place the bending aid here and use it to hold the sheet down. Use the other hand to bend one half of the side panel vertically.

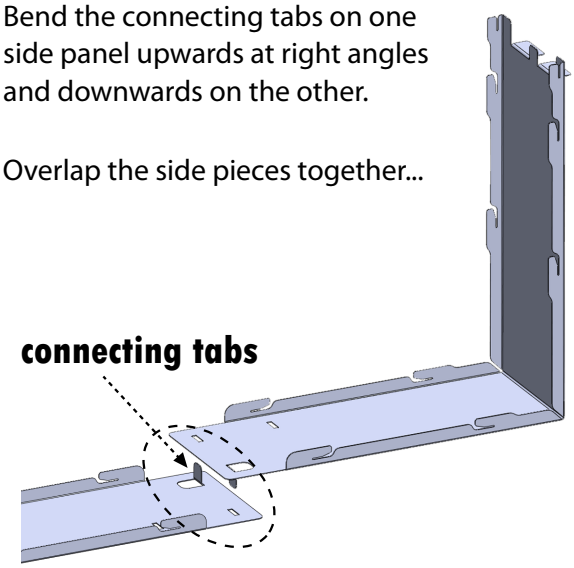

2. Position the bending aid at the top with the slot here and bend the two tabs outwards horizontally and with sharp edges as shown.
Do not bend the centre bar.
Bend the second side panel in the same way.

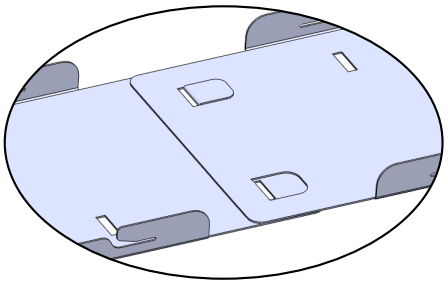

3. Bend the connecting tabs on one side panel upwards at right angles and downwards on the other.

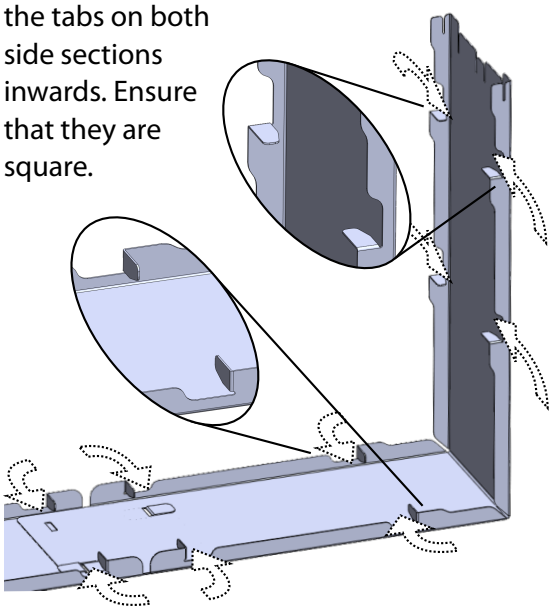

4. Overlap the side pieces together...

5. Press the connecting tabs flat so that the side sections interlock.

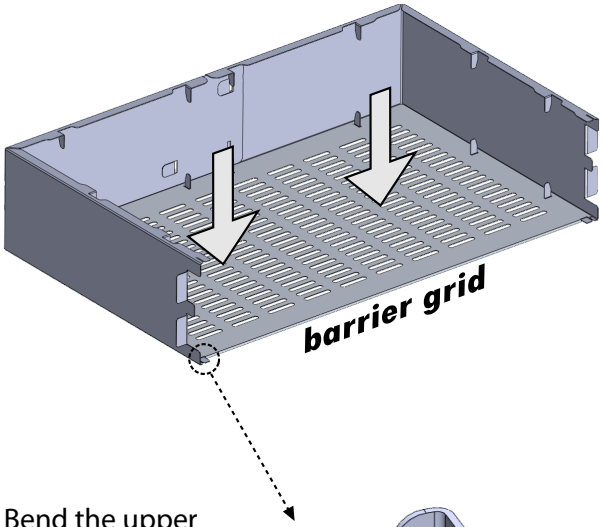

6. As shown, bend the tabs on both side sections inwards. Ensure that they are square.

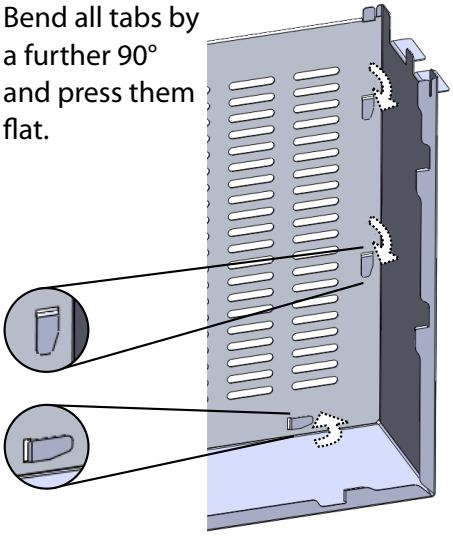

7. Place the side panel on a flat surface. Thread the barrier grid into the small tabs with the bead facing outwards.

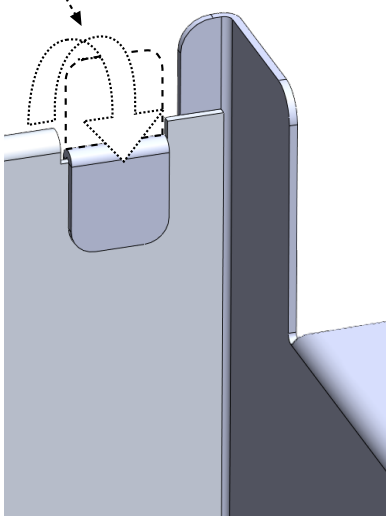

There is a corresponding slot in the barrier grid for each tab, except for the upper corner tabs.

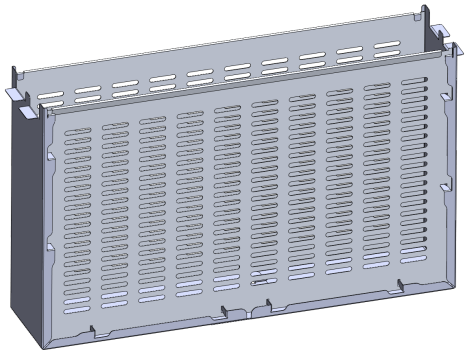

8. Bend all tabs by a further 90° and press them flat.

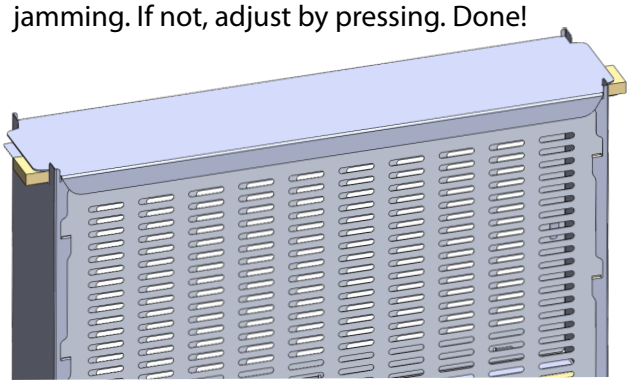

9. Bend the upper corner bracket flat into the recess of the barrier grid.

10. Insert the second barrier grid on the opposite side in the same way (steps 7-9).

11. Place the frames inside. Put on the lid. Check whether the lid fits without jamming. If not, adjust by pressing. Done!

Do not disassemble after assembly!
